Who We Are

Headquartered in Chicago, ServerCentral is an industry-leading data center solutions provider specializing in infrastructure colocation, IP networking, cloud computing, and managed services. Our strategically-located worldwide facilities allow us to serve a diverse roster of clients, from Fortune 500 companies, to online retailers, small businesses and more. With our personalized services, 24/7 on-site technical support, and secure design strategy, ServerCentral knows how to keep your customer's critical IT infrastructure running smoothly.

Core Strengths

ServerCentral provides unwavering commitment to ensuring your customers benefit from strong colocation or data recovery services. We provide industry-leading excellence in:

- On-Demand Capacity
- Flexible Connectivity
- Customer service
- Redundancy
- Scalability
- Financial stability

Other providers often compromise in one or more of the above criteria to remain competitive. We never cut corners. Instead, we differentiate ourselves by offering flexible, creative solutions engineered to meet your customers' requirements.

Why ServerCentral?

ServerCentral Infrastructure Colocation, IP Networking, Cloud Computing, and Managed Services remove the time and capital expenditures of building out or managing a primary or supplementary data center.

Our services can quickly add space, server capacity, network connectivity, or application upgrades to your customers' data center operations. With your IT and communications operating in our safe and secure facilities, your customers' equipment will always be cared for by our expert engineers, giving you the freedom to focus on what really matters—running your core business.

Cutting Edge Cloud Computing Infrastructure

We are excited to offer cloud computing to you and your customers. Whether your customers require private or shared cloud services, we have a solution to fit their needs. ServerCentral Dedicated Private Cloud (DPC) Services use high-capacity, single-tenant infrastructure to provide truly private, scalable cloud computing and storage.

ServerCentral High Performance Cloud (HPC) Services offer the same powerful infrastructure in smaller, modular, building blocks. Your customers will be able to rebrand our powerful interface as their own, as well as spin up easily scalable VMs in any configuration in minutes.

Our ServerCentral DPC and HPC Services meet unique cloud computing requirements of different customers, ensure smooth deployment, and provide maximum performance and scalability. Backed by industry-leading 100% uptime service level agreements (SLAs), our services and support preserve the reliability and security of your customers' data in the Cloud.

Nominate yourself to our Elite Cloud Partnership team to gain early access to the next exciting computing innovation. **Visit us at Booth #1130 for more information.**

Who We Are

Founded in 2002, nLayer Communications was started by an experienced team of Internet professionals looking to build a superior IP network with higher capacity, better performance, and lower cost wholesale IP services than traditional legacy carriers. Today, nLayer Communications is an industry-leading provider of high-speed Internet access, data transport, and managed network services throughout North America, Europe and Asia.

Setting the Standard

nLayer Communications' experience delivering large-scale networking services has allowed us to provide unmatched value to your customers through legacy-free, low-cost solutions for clients with even the largest bandwidth requirements. By utilizing the latest state-of-the-art technology and innovative, efficient techniques, nLayer Communications sets the new standard for affordable, high-quality Internet services.

Exceptional Customer Service

Our goal is to provide superior customer service with rapid response and constant access to certified technical staff 24/7. Because we focus exclusively on high-speed wholesale IP services, our dedicated IP engineers are available without the delays commonly found with traditional carrier support. Our flexible billing options for multi-location customers allow us to aggregate ports into a 95th percentile bill. Granting transparency into our routing procedures and policies helps your customers ensure their traffic will always be routed through the most direct and optimal path possible. At nLayer Communications, we customize solutions for customer needs.

Cutting Edge Infrastructure

The nLayer Global IP Network provides your customers with the reliability and performance needed to keep their company connected. Our OC-192/10GE based Global IP Network is built upon carrier-class routing infrastructure from Juniper Networks, the foremost provider of next-generation IP backbone products. By adopting an all-Juniper core infrastructure, we are able to provide unparalleled stability, routing policy control, and IP packet filtering without compromising performance.

"Ready Now" Capacity

nLayer Communications proactively monitors traffic growth to ensure sufficient capacity is provisioned before it is needed using our large amounts of "ready now" capacity in reserve. This gives us unmatched capabilities for handling traffic bursts and congestion, as we are able to ensure that ports are open and ready for your customer needs at a moment's notice.

Unrivaled Reliability

nLayer Communications acquires large amounts of backbone diversity from numerous long-haul fiber networks to ensure that your customers' network services will never experience complete path failure or degraded performance. We are so confident in our operating reliability that we offer aggressive 100% uptime Service Level Agreements (SLAs) on IP services and strong SLAs on transit time and packet loss.

Learn about one of the largest privately held IP networks in the world (by traffic volume) and how your customers can gain access to over 40 POPs in 24 markets worldwide. **Visit us at Booth #1130 for more information.**
